TABLE OF CONTENTS

Si.No	ACTIVITY	PAGE No.
1	Design a responsive webpage using HTML5 semantic elements and CSS.	1
2	Implement CSS animations and transitions on webpage elements.	10
3	Create a webpage demonstrating CSS Flexbox layouts.	15
4	Design a pricing table layout using HTML and CSS.	20
5	Design a multi-section landing page using HTML and CSS.	24
6	Write a JavaScript program to validate a registration form.	30
7	Write a JavaScript program to filter and search data dynamically.	33
8	Implement an image slideshow using JavaScript and CSS Grid.	36
9	Create a real-time digital clock using JavaScript.	40
10	Implement dropdown-based content rendering using JavaScript.	43
11	Write a program to display student details (name, age, grade) using JSON.	47
12	Develop a web application using JavaScript and HTML that fetches weather data from a public API and displays temperature, weather condition, humidity, and wind speed.	50
13	Create a webpage that changes theme dynamically using JavaScript.	54
14	Design a responsive webpage using Bootstrap 5 grid system with login and registration pages.	59
15	Design a webpage using Material Design cards and buttons.	63
16	Create a webpage that combines Bootstrap and Material Design components for a professional UI.	69
17	Develop a web application using Bootstrap 5, Material Design components, LocalStorage CRUD operations, and dynamic product rendering using JavaScript.	75
18	Create a calculator application in Flask using AJAX.	82
19	Create a suggestion form using AJAX in Flask.	84

20	Create a Django project and display “Hello World” in the browser.	86
21	Create a Django application and configure it in the Django project.	87
22	Create a Django model for Student, perform migrations, and register the model in the Django admin panel.	88
23	Perform CRUD operations using Django ORM.	90
24	Create function-based views in Django.	94
25	Create class-based views in Django.	95
26	Configure dynamic URL routing in a Django application.	96
27	Create a Django login and logout system and implement dark mode and light mode toggle using HTML and CSS.	97
28	Protect views in Django using the login_required decorator.	99
29	Create a Python library with functions for AI tasks, package it, and integrate it into a Flask application.	100
30	Develop a personal online resume or portfolio website using Flask and deploy it on a free hosting platform.	105
31	Create a role-based authentication system using Django.	112
32	Develop a Student Management System with CRUD operations.	114
33	Create a simple online feedback system with database integration.	118
34	Create a blog application using Django.	123
35	Implement session management in Django.	126
36	Implement pagination and search functionality in a Django application.	129
37	Implement form validation and error handling in Django forms.	133
38	Create a secure authentication system with password hashing.	139
39	Deploy a full-stack web application on a free hosting platform.	147
40	**PROJECT** Mentirx (College Mentoring System)	160
